## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1, 3-9 and 12-19 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3-9 and 12-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Babbs et al US Patent 6,475,232 B1 in view of Myers et al US Patent 5,735,892 and further in view of Gianturco US Patent 5,282,824.

Babbs et al discloses a prosthetic device (10) comprising a proximal, inflow end of a stent graft device as a whole, a distal, outflow end of the stent graft device as a whole, at least one stent having a proximal stent end, and a distal stent end. The distal stent end of the at least one stent providing said distal, outflow end of the stent graft device as a whole through which blood flowing through the stent graft can exit the stent graft. The stent graft having a cover (12) made of SIS. However, Babbs et al Douglas does not disclose a graft wherein the first and second ends are secured to each other at the distal stent end of the stent and sutures securing the graft to the struts.

Myers et al teaches a stent covered by a graft that has twice the length of the stent and is folded from one end and is secured at the other end by sutures (see Figure 8 and col. 7, lines 52-61)

Gianturco teaches a stent connected by a graft with sutures and the sutures are secured to the stent by the struts.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the graft of the Babbs et al reference with the graft of the Myers et al reference in order to suture the graft at one end instead on at the middle of the stent and by suturing the graft to the stent struts in order to create a strong attachment of the graft with the stent.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
